REPORT

REPORT

Faculty Induction Programme was organized & conducted by Internal Quality Assurance Cell of Vivekanandha College of Engineering for Women (Autonomous) on 12th August 2023 for newly joined faculty members.

The programme was started with the welcome address given by Dr.R.Saravanakumar, Director IQAC.

Session I was handled by Prof.Dr.S.Kuppuswami, Executive Director on “Communication Skills, Mode and Knowledge Dissemination”.

Session II was handled by Dr.KCK.Vijayakumar, Principal on “Miscellaneous Aspects (Institutional Management & Administrative Procedures)”.

Session III was handled by Dr.P.Kannan, CoE on “Regulations & Autonomous Affairs”.

Session IV was handled by Dr.P.Kannan, HoD/EEE on “HR Policy & Stress Management”.

Session V was handled by Dr.C.Poongodi, HoD/CSE on “Technology Enabled Learning and Life-long Self-learning”.

Session VI was handled by Dr.R.Saravanakumar, Director IQAC on “ISO & Instructional Planning and Delivery”.

Session VII was handled by Dr.M.Sayee Kumar, HoD/CST on “Moodle & LMS Platform”.

The Faculty Members gave their feedback about the programme and thus the programme ended successfully with the vote of thanks given by Mr.D.Santhoshkumar, IQAC Deputy Coordinator.

APPROVAL LETTER

	<p>VIVEKANANDHA COLLEGE OF ENGINEERING FOR WOMEN (Autonomous) Tiruchengode, Namakkal – 637205.</p>	
--	---	---

Date: 08.08.2023

Submitted to the Principal for kind approval:

Internal Quality Assurance Cell is organizing a one day Faculty Induction Programme to newly joined faculty members on 12.08.2023 (Saturday) in CSE Smart Classroom. In this regard, we request you to grant necessary approval.

The details of faculty members are attached for your kind reference.

ACTIVITY SESSION

Passion is the Key

A K Mallik
Mechanical Engineering

George Bernard Shaw once said "Those who can, do. Those who cannot, teach." If the choice of teaching profession is dictated according to this principle, then there is nothing much to write about teaching. But every one needs to learn and teachers are supposed to help in this process of learning. What all teachers (and students) need to remember is that while almost everything can be learnt, almost nothing can be taught. This is equally valid for "teaching". No one can teach others how to teach. Every one has to develop his or her own style of effective teaching as Mark Twain has cautioned us "Let school not interfere with your education."

A teacher is supposed to be only an aid to the learning process, at best a motivator. To be a successful motivator, one needs to be motivated. To be successful in this, like in every thing else, one needs to be passionate and honest, rather than just being professional and knowledgeable. No doubt the latter two qualities are essential but not sufficient.

Successful teachers are passionate
and honest and not just
knowledgeable

3 After teaching for more than thirty-five years in the IIT system, I must admit that I find teaching is much easier than writing about teaching. We always remember our teachers and try to consciously or unconsciously simulate the good qualities that we had appreciated in them as students. We also learnt from our teachers what to avoid while teaching. The set of teachers mentioned above are not necessarily mutually exclusive. The same teacher might have had both these opposite attributes in different aspects of teaching.

4 The style of effective teaching varies widely depending on the level and quality of students, the nature of the subject and the size of the class. The one thing that remains invariant is to try to motivate the students to think and learn on their own. The best way to achieve this is by posing challenging problems once the background material is covered.

Encouraging students to ask meaningful questions is an integral part of good teaching. Any honest doubt is a meaningful question. If it is straightforward, the teacher answers it.

Effective teaching is about having to motivate the students to think and learn on their own

4 If the question is a well-thought one, then the teacher must appreciate the question and explicitly say so to encourage the students. Special credit should be given if the teacher cannot immediately resolve it. The discussion that follows even without providing a satisfactory answer can often be more enlightening than a quick, smart answer from the teacher.

5 The teacher should refrain from being just a conduit of information available in books and other sources. How the teacher thinks and the presentation of this thought process is more important than what is stored in the memory bank of the teacher. My teaching experience is mainly limited to the IIT system, which ensures (i) a lot of freedom to choose the course content and (ii) mostly quite intelligent and some very motivated students. So whatever I write will be based on these two assumptions.

5 The contents of a course must justify why it constitutes a separate course. A brief history of the subject, how it grew, and what new questions had to be answered before it could demand a separate course is often very stimulating.

How this subject fits in the overall knowledge of that particular discipline also needs to be emphasized. Whenever possible, all the topics need to be threaded with a single theme and should be serially presented. At the end, current questions awaiting answers ought to be mentioned. A dead subject cannot attract young, inquisitive minds.

The contents of a course must justify why it constitutes a separate course

As an example in Mechanical Engineering, one can talk of a time when steam and internal combustion engines constituted a major part of the discipline. Consequently, analysis and design of a slider-crank mechanism had an important place in a course on "Theory of Machines". Later on, the development of other high-speed and heavy-duty machines including robots demanded a more generalized approach to the study of motion and force transfer by a series and/or parallel connection of a number of bodies constituting a machine. Specialized techniques applicable to only slider-crank mechanisms lost their importance. Rather "Kinematics of Machines" dealing with generalized geometric aspects of motion transfer grew into a separate course. While teaching kinematics, the teacher needs to point out that this provides only one of the steps towards the overall design and fabrication of a machine. Towards that end, knowledge in other subjects, such as machine dynamics/vibrations, thermal sciences, fluid dynamics, manufacturing processes, etc., that constitute the overall programme of mechanical engineering is essential.

An example

At the basic level, a good text stressing the fundamentals should be prescribed and students must be encouraged to study a good text thoroughly rather than banking only on the class notes. After developing any theory, both its limitations and applications to real life engineering practices should be pointed out.

Students must be encouraged to study a good text thoroughly rather than depending only on class notes

For a large class, a systematic presentation with neat board work gains importance. But still I prefer a conversational mode rather than a one-way traffic

where only I speak and the students listen. A seminar mode may be somewhat all right for certain advanced topics presented in a graduate course with a few students. In every presentation eye contact with the students is a must to get instant feedback about the reception of what is being delivered.

For better understanding both ears and eyes are helpful in assisting the brain. So visual aids, static or dynamic, whenever feasible, should be used. Such aids help to wake up sleepy students and also moderate the speed of delivery. Computer animation, small-scale models are both found to be quite effective in communicating complex ideas. Towards this end, I have used coloured plastic articulated models of real life mechanisms. These could be projected on to a screen using an overhead projector. The models could be moved to replicate actual relative movements between various parts of a machine. These demonstrations are very popular with the students. No doubt because better understanding, than what could be achieved through a number of clumsy and complicated drawings and long oral explanation, is achieved.

In large classes, a systematic presentation, neat board work, good body language and audio visual aids help

Classroom demonstrations in a course on dynamics/vibration are well received by the students. These include simple experiments on resonance, both forced and parametric, to show these non-intuitive phenomena dramatically. The surprising motion of a superball, thrown with sufficient backspin, adds great interest to the study of impact phenomenon. A complex topic like the stability of a rotating rigid body can draw the interest of the students by the demonstration of sudden flipping of a tippie-top. The direction of the gyroscopic couple, again somewhat counter-intuitive, is demonstrated by asking a student to rotate the axis of a spinning bicycle wheel while standing on a free platform. The demonstrations should be simple (but not trivial) and not very time consuming. At the same time, these should be timely and directly relevant to the course material so that the students can fully analyze and appreciate the importance of

Use simple, effective classroom demonstrations to teach complex topics

the theory. Similar simple demonstrations can also be used effectively in a course on Mechanics of Solids.

The material that is to be covered in one lecture needs to be clearly thought out. Here past experience helps in deciding how much can be comfortably covered in one lecture. This helps to avoid rushing through the material at the end of the class when the students are already mentally tired. A little recapitulation of the end part of the previous lecture may ideally form the beginning of the next lecture, especially when the same topic is continued. In IIT Kanpur, tutors (who may be past or future instructors of the same course) involved in a course are normally expected to sit in the lectures delivered by the instructor. This practice helps both the instructor and the tutors who freely discuss what went all right and what did not in a particular lecture.

The material that is to be covered in one lecture needs to be clearly thought out

One important thing is that the teacher should not appear intimidating and discriminating—that discourages the students from asking questions. Even when the content is “old” for the teacher, one needs to remember that the students are going to hear it for the first time. The teacher should appear to be excited about what is being delivered. This entails a bit of acting in some sense. The teacher should try to recreate the same excitement that he or she had during their own first clear understanding of the concept. If the teacher appears to be passionate about the subject, then the students share the same passion. It is this fun of learning together a new thing that goes a long way in establishing a strong bond between the teacher and the students.

The teacher should not appear intimidating; that discourages the students from asking questions

There are three distinct academic activities—creation, assimilation and transmission of knowledge. No doubt the last two are of major importance for a successful teacher. The master, who creates, can share the thrill of creation directly. However, the teacher, even if not directly connected with the creation of knowledge, should remain aware of the current trends in the subject. Whenever

opportunities arise, mention of the current activities and trends remind the students that knowledge by definition is incomplete and ever expanding.

Normally in the teaching profession, terms like teaching "load" or teaching "duties" are used. A teacher, aspiring to be successful, needs to look at teaching as something beyond mere professional duty or load. A lot of enjoyment is derived even if a few young minds can be ignited; it is the ones who remember their teachers for a long time. That is the best reward for any teacher, much bigger than any official recognition. Most successful teachers are passionate communicators—rather than just impassionate carriers of knowledge and information, who develop personal relationship with the students.

A teacher needs to look at teaching as something beyond mere professional "duty" or "load"

A K Mallik is a Professor of Mechanical Engineering at Indian Institute of Technology, Kanpur. He has authored 6 books and 70 research papers in international journals. He is a fellow of all the four National Academies of Engineering and Sciences in India. He received the Distinguished Teacher Award from IIT Kanpur in 2003. The author can be contacted at akmallik@iitk.ac.in

Experts	Key Takeaway
Dr.KCK.Vijayakumar, Principal	1. I learn how to teachers should on their responsibilities. 2. I learn about the how the teachers should give their knowledge to students. 3. And learn how to engage the class based on some activities.
Dr.P.Kannan, COE	1. I get a knowledge about how the COE is working of evaluating the students exam papers. 2. And I got the information about BOS, etc... 3. And how to calculate the marks to grade system.
Dr.P.Kannan, HoD/EEE, VCEW	1. He gave us how to manage the stress. 2. And how to manage the stress & how to control it. 3. And gave some exercises.
Dr.C.Poongodi, HoD/IT, VCEW	1. she gave us to how to do the research & PD 2. How to get new research papers. 3. How to get the life time ideas.
Dr.R.Saravana Kumar, Director IQAC, VCEW	1. Learn about ISO 2. Learn about PO, CO, POC mapping. 3. Learn about the IQAC is working.
Dr.M.Sayee Kumar, HoD/CST, VCEW	1. Learn about the Moodle & LMS 2. How to work on Moodle. 3. To create a user, course, etc....
