M.Tech. Information Technology

Regulations – 2023

CHOICE BASED CREDIT SYSTEM

COLLEGE VISION

To impart value based education in Engineering and Technology to empower young women to meet the societal exigency with a global outlook

COLLEGE MISSION

- To provide holistic education through innovative teaching-learning practices
- To instill self confidence among rural students by supplementing with co-curricular and extra-curricular activities
- To inculcate the spirit of innovation through training, research and development
- To provide industrial exposure to meet the global challenges
- To create an environment for continual progress through lifelong learning

DEPARTMENT VISION

Providing quality education to transform students into technically competent skilled women to excel in IT profession, innovation and entrepreneurship.

DEPARTMENT MISSION

- To empower knowledge on cutting-edge technologies in the field of InformationTechnology to develop innovative solutions for real-world problems.
- To create a platform for innovation, research and new technology development
- To inculcate ethical practices, life-long learning and sense of societal responsibilities to support the career and personal development of the learner

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs):

- **PEO 1:** The Leadership and team-player ability that enables the students to play a major role as innovators in product design and development related organizations and as an entrepreneur.
- **PEO 2 :** Students are expertise to think creatively to discover the real time problems which cater the needs of the society.
- **PEO 3:** To deliver the fundamental responsibilities and progressive knowledge to the graduates that enables them to excellence in delivering lectures, to excel in diverse careers with integrity and ethics.

PROGRAMME OUTCOMES (POs):

Postgraduate engineering programmes are designed to prepare graduates to attain the following program outcomes:

- **1. Engineering knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineeringproblems.
- 2. **Problem analysis**: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- 3. **Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations
- **4. Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- 5. **Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- 6. **The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- 7. **Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- 8. Ethics: Apply ethical principles and commit to professional ethics and responsibilities and

- norms of the engineering practice.
- 9. **Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- 10. Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- 11. Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments
- 12. **Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change

PROGRAM SPECIFIC OUTCOMES

- 1. Ability to solve complex Knowledge Engineering problems by building Systems across various domains including Systems Engineering, Software Development & Engineering.
- 2. Obtain an understanding of Qualitative and quantitative research and apply this knowledge in the context of professional future.

Mapping of Program Educational Objectives with Program Outcomes

A broad relation between the program objective and the outcomes is given in the following table

Programme		Programme Outcomes											
Educational Objectives	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	
I	$\sqrt{}$	$\sqrt{}$	$\sqrt{}$		\checkmark	\checkmark		V	$\sqrt{}$

Know the characterial

- Know the characteristics of machine learning that make it useful to real-worldproblems and the basic underlying concepts
- Know Characteristics of supervised machine learning algorithms
- To learn unsupervised algorithms for clustering, Instance-based learning and Principal Component Analysis
- The inference and learning algorithms for the hidden Markov model and Bayesian networks and few machine learning tools
- Various advanced machine learning algorithms in a range of real-world applications.

Course Outcome

Course

Objective

Knowledge At the end of the course, the student should be able to, level CO1: Understand the basic concepts, fundamental issues and challenges of K2 machine learning algorithms and the paradigms of supervised learning. K2 **CO2:** Understand the basic concepts of un-supervised machine learning. K3 **CO3:** Design and implement basic machine learning algorithms using tools. CO4: Understand the basic concepts and architecture of reinforcement learning K2 algorithms CO5: Design and implement various advanced machine learning algorithms in K3 a range of real world applications.

Pre- requisites Artificial Intelligence

- 2. Assignment / Quiz / Seminar
- 3. End-Semester examinations

Indirect

1. Course - end survey

Content of the syllabus

Unit – I Introduction Periods 9

Introduction - classic and adaptive machines - Types of machine learning - Deep Learning and Bio inspired Adaptive Systems - Machine Learning and Bigdata - Elements: Data Formats - Learnability - Statistical Learning Approaches.

Unit - II Feature Selection and Feature Engineering Periods 9

scikit-learn toy datasets - Creating training and test sets - Managing categorical data - Managing missing features - Data scaling and normalization - Feature selection and filtering - Principal component analysis - Atom extraction and dictionary learning.

Unit – III Linear and Logistic Regression Periods 9

Linear models - A bidimensional example - Linear regression with scikit-learn and higher dimensionality - Polynomial regression - Isotonic regression

Logistic Regression: Implementation and optimizations - Stochastic gradient descent algorithms - Classification metrics - ROC curve

Graphical Models - Undirected graphical models - Markov Random Fields - Directed Graphical Models - Bayesian Networks - Conditional independence properties - Inference — Learning - Generalization - Hidden

Markov Models – Machine learning tools – R, Scikit Learn, Octave, BigML, WEKA.

Unit – IV Classification and Clustering Algorithms

Periods

9

Bayes' theorem - Naive Bayes classifiers - Naive Bayes in scikit-learn - Support Vector Machines - Decision Trees and Ensemble Learning - Clustering basics - K-means - DBSCAN - Spectral clustering - Evaluation methods based on the ground truth - Hierarchical Clustering

Unit – V Advanced Concepts

Periods

9

Introduction to Recommendation Systems - Introduction to Natural Language Processing - Topic Modeling and Sentiment Analysis in NLP - Introduction to Deep Learning and TensorFlow

Total Pariods 45

ontent of the syllabus	CO's
 Implement and demonstrate the FIND-S algorithm for finding the most specific hypothesis based on a given set of training data samples. Read the training data from a .CSV file. 	CO1
2. For a given set of training data examples stored in a .CSV file, implement and demonstrate the Candidate-Elimination algorithm to output a description of the set of all hypotheses consistent with the training examples.	CO1
3. Write a program to demonstrate the working of the decision tree based ID3 algorithm. Use an appropriate data set for building the decision tree and apply this knowledge to classify a new sample.	CO2
4. Build an Artificial Neural Network by implementing the Back propagation algorithm and test the same using appropriate data sets.	СОЗ
5. Write a program to implement the naïve Bayesian classifier for a sample training data set stored as a .CSV file. Compute the accuracy of the classifier, considering few test data sets.	CO4
6. Assuming a set of documents that need to be classified, use the naïve Bayesian Classifier model to perform this task. Built-in Java classes/API can be used to write the program. Calculate the accuracy, precision, and recall for your data set.	CO4
7. Write a program to construct a Bayesian network considering medical data. Use this model to demonstrate the diagnosis of heart patients using standard Heart Disease Data Set. You can use Java/Python ML library classes/API.	CO4
8. Apply EM algorithm to cluster a set of data stored in a .CSV file. Use the same data set for clustering using k-Means algorithm. Compare the results of these two algorithms and comment on the quality of clustering. You can add Java/Python ML library classes/API in the program.	CO5
9. Write a program to implement k-Nearest Neighbour algorithm to classify the iris data set. Print both correct and wrong predictions. Java/Python ML library classes can be used for this problem.	CO5
10. Implement the non-parametric Locally Weighted Regression algorithm in order to fit data points. Select appropriate data set for your experiment and draw graphs.	CO5

SEMESTER -II

Course

Objective

VIVEKANANDHA COLLEGE OF ENGINEERING FOR WOMEN

(Autonomous Institution, Affiliated to Anna University ,Chennai) Elayampalayam, Tiruchengode – 637 205

Programme	M.Tech.	Pr	ogram	me Coo	de	204	Regulation	2023	
Department	INFORMATIC	N TECHNO	LOGY	•		Se	mester	II	
Course Code	Course Name		Perio	ds Per	Week	Credit	Maximum	Marks	
Course Code	Course Name		L	T	P	С	CA	ESE	Total
P23IT205	Cloud Comput	ing	3	0	0	3	40	60	100
1 2311 203	Technologies		3	U	U	3	40	00	100
	The Main Object	tive of the cor	irse is t	0					

- Gain expertise in Virtualization, Virtual Machines and deploy practical virtualization solution
- Understand the architecture, infrastructure and delivery models of cloud computing
- Explore the roster of AWS services and illustrate the way to make applications in AWS
- Gain knowledge in the working of Windows Azure and Storage services offered by Windows Azure
- Develop the cloud application using various programming model of Hadoop

	bevelop the cloud application using various programming model of it	adoop
	At the end of the course, the student should be able to,	Knowledge level
	CO1:Employ the concepts of virtualization in the cloud computing	K3
Course Outcome	CO2:Identify the architecture, infrastructure and delivery models of cloud computing	K2
0 44001110	CO3:Develop the Cloud Application in AWS platform	K3
	CO4:Apply the concepts of Windows Azure to design Cloud Application	К3
	CO5: Develop services using various Cloud computing programming models.	К3

The Main Objective of the course is to

Course Objective

- To learn about supervised and unsupervised pattern classifiers.
- To familiarize about different feature extraction techniques.
- To explore the role of Hidden Marko model and SVM in pattern recognition.
- To understand the application of Fuzzy logic and genetic algorithms for pattern classifier

Course	CO1: Differe
Outcome	CO2: Classify
0 440001110	CO3: Extract

At the end of the course, the student should be able to,	knowledge level
CO1: Differentiate between supervised and unsupervised classifiers	K2
CO2: Classify the data and identify the patterns	K2
CO3: Extract feature set and select the features from given data set	K3
CO4: Apply fuzzy logic and genetic algorithms for classification problems	K2
CO5: Apply pattern Classifiers and Recognition model using Recent advances	K3

Pre-requisites Machine Learning

Course

Objective

- Understand the technology components of blockchain-based digital currencies, cryptographic functions and hashes, the process of currency issuance and mining, proof-of-work, consensus and distributed ledger technology.
- Understand alternatives to bitcoin, such as alt-coins, Ethereum and Bitcoin Cash.
- Understand what parallels and differences cryptocurrencies have with the existing monetary and banking systems.
- Understand likely frameworks for regulating cryptocurrencies, challenges with current regulatory landscape.
- Be able to place cryptocurrencies in the context of disruptive innovations and understand their potential for growth or development.

Course
Outcome

At the end of the course, the student should be able to,	Knowledge level
CO1: Learn about Blockchain and explore the working of Blockchain technology	K2
CO2: Understand the working of Bitcoin and cryptocurrency	K2
CO3: Understand and analye the working of Hyperledger	K2, K4
CO4: Apply the learning of solidity to build de-centralized apps on Ethereum and analyze the working of Smart Contracts	K3, K4
CO5: Develop applications on Blockchain	K6

The student should be made to,

Course Objective

- Managing immense amounts of data quickly using MapReduce.
- Examining data for similar items.
- Efficient mining of data streams.
- Analyzing large-scale data derived from social-networks.
- Online advertising and Recommender systems

At the end of the course, the student should be able to

Course
Outcome

At the chi of the course, the student should be able to,					
CO1: Use Map Reduce to handle large amount of data.					
CO2: Analyze similarity problem as finding sets with large intersection and also to test the degree of similarity among data.					
	CO3: Summarize data streams, filter it and efficiently store it for future use.	K3			
	CO4: Identify communities, similarity among nodes of a graph, measure the connectedness of community, and measure the neighborhood size of nodes in a graph.				

CO5: Use algorithms to address issues like matching problems and ad words problem.

Course

Objective

VIVEKANANDHA COLLEGE OF ENGINEERING FOR WOMEN

(Autonomous Institution Affiliated to Anna University, Chennai) Elayampalayam, Tiruchengode – 637 205

Programme	M.E. / M.Tech.	Programme co	de		Regula	tion	2023	
Department	CSE & IT	Semester						
Course Code	Course name	Periods per we	ek		Credit	Maxi	mum Ma	rks
P23ITE09	Computer Vision*	L	T	P	С	CA	ESE	Total
F 2311 EU9	Computer vision	3	0	0	3	40	60	100

The Main Objective of the course is to

- To review image processing techniques for computer vision.
- To understand shape and region analysis.
- To understand Hough Transform and its applications to detect lines, circles, ellipses.
- To understand three-dimensional image analysis techniques.
- To understand motion analysis.

	To differ state in otion and your.	
	At the end of the course, the student should be able to,	Knowledge level
Course	CO1: Implement fundamental image processing techniques required for computer vision	K2
Outcome	CO2: Perform shape analysis and Implement boundary tracking techniques	K2
	CO3: Apply Hough Transform for line, circle, and ellipse detections.	K3
	CO4: Apply 3D vision techniques.	K3
	CO5: Develop applications using computer vision techniques.	K3

Course **Objective**

The student should be made to,

- Understand the image fundamentals and mathematical transforms necessary for image processing and to study the image enhancementtechniques.
- Understand the image segmentation and representation techniques.
- Understand how image are analyzed to extract features of interest.
- Learn the concepts of image registration and image fusion.
- Analyze the constraints in image processing when dealing with 3D datasets.

Course
Outcome

At the end of the course, the student should be able to,	Knowledge level
CO1: Understand the image fundamentals and mathematical transforms necessary for image processing and to study the image enhancement techniques.	K2
CO2: Understand the image segmentation and representation techniques.	K2
CO3: Design and implement how image are analyzed to extract features of interest.	К3
CO4: Understand the concepts of image registration and image fusion.	K2

CO5: Analyze the constraints in image processing when dealing with 3Ddata **K**3 sets.

The Main Objective of the course is to

Course Objective

- understand the role of information theory for an efficient, error-free and secure delivery of information using binary data streams
- have a complete understanding of error-control coding.
- understand encoding and decoding of digital data streams
- introduce methods for the generation of these codes and their decoding techniques.
- have a detailed knowledge of compression and decompression techniques

Course Outcome

At the end of the course, the student should be able to,	Knowledge level
CO1: To be able to understand the principles behind an efficient, correct and secure transmission of digital data stream	K2
CO2: To be familiar with the basics of error-coding techniques	K2
CO3: To have knowledge about the encoding and decoding of digital data streams	K3
CO4: Generation of codes and knowledge about compression and decompression techniques.	K2
CO5: To be able to understand the performance requirements of various coding techniques	К3

The student should be made to,

Course Objective

- Understand the basic digital forensics and techniques for conducting the forensic examination on different digital devices.
- Understand how to examine digital evidences such as the data acquisition, identification analysis.
- Understand the tactics of military and terrorists.
- Study the tools of identifying the hackers and theft.
- Know about how to searching and seizing the computer related evidence

Course Outcome

At the end of the course, the student should be able to,	Knowledge
	level
CO1: Know how to apply forensic analysis tools to recover important evidence for identifying computer crime.	К3
CO2: Train as next-generation computer crime investigators.	K2
CO3: Analyze how to reconstruct the past events an know the tactics of military, terrorist and company	K3
CO4: Know how to apply Surveillance tools to identify the hackers and theft.	К3
CO5: Identify searching and seizing the computer related evidence.	K4

Course Objective	 The main objective of the course is Learn to demonstrate a critical understanding of key concepts in disaster risk reduction and humanitarian response. Critically evaluate disaster risk reduction and humanitarian response policy and practice from multiple perspectives. Develop an understanding of standards of humanitarian response and practical relevance in specific types of disasters and conflict situations. Critically understand the strengths and weaknesses of disaster management approaches, planning and programming in different countries, particularly their home country or the countries they work. Categorize the Risk Assessment in national level and global level.
